Professional Summary

Final-year Computer Science student with strong experience in Python development, FastAPI, workflow automation, AI-powered systems, and scalable backend applications. Skilled in building production-ready APIs, MCP servers, OCR pipelines, automation workflows, and cloud-deployed applications using Python, Docker, PostgreSQL, and modern developer tools. Passionate about solving real-world problems through automation and intelligent systems.

Technical Skills

- **Languages:** Python, JavaScript, C++, C#, SQL
- **Frameworks/Tools:** FastAPI, Docker, Git, GitHub, n8n, MongoDB, PostgreSQL
- **AI & Automation:** RAG, GraphRAG, OCR, MCP Servers, API Integrations, Workflow Automation
- **Deployment/DevOps:** Railway, Render, Docker Compose, CI/CD, Linux

Experience

Python & Automation Developer Intern — Inddig Media Pvt Ltd

Mar 2026 – Present

- Developed AI-driven medical appointment infrastructure using FastAPI and Google Calendar API for automated scheduling and patient management.
- Built scalable backend systems with PostgreSQL, Railway deployment, OAuth integrations, and DNS management for enterprise-level client applications.
- Designed automation workflows using n8n for Google Review management across 400+ client profiles, significantly reducing manual work.
- Managed deployment pipelines, SSL setup, hosting configurations, and CI/CD workflows for production systems.

AI Engineer Intern — SentimentAI

Jul 2025 – Jul 2025

- Developed invoice automation and OCR-based document processing systems using Python and API integrations.
- Built Telegram AI Bot integrated with n8n for intelligent PDF/Image document analysis and conversational AI workflows.
- Created Google Maps and LinkedIn scrapers for lead generation, recruitment workflows, and market research automation.
- Worked extensively with BeautifulSoup, Puppeteer, OCR APIs, automation pipelines, and real-time data extraction systems.

Projects

Business Scraper MCP

- Developed a production-ready MCP (Model Context Protocol) server for scraping business leads from Google Maps using FastMCP, httpx, pandas, and Prefab UI.
- Implemented async business search tools, Google Places API integrations, Apify fallback systems, exponential retry handling, pagination, and email extraction crawlers.
- Designed modular architecture with Pydantic validation, structured logging, Docker deployment, CSV export tools, rate limiting, and interactive business card rendering.

TrendGraphAI

- Built an AI-powered research intelligence platform using Python, FastAPI, GraphRAG, PostgreSQL, pgvector, and Docker.
- Implemented semantic vector search, automated arXiv research extraction, embedding pipelines, and intelligent document retrieval workflows.
- Developed scalable backend APIs integrated with Groq API and Sentence Transformers for AI-driven research analysis.

GitLite

- Developed a GitHub-style clone application using FastAPI with JWT authentication, Docker containerization, and Render deployment.
- Implemented secure login systems, protected APIs, repository-style architecture, and production-ready backend deployment workflows.

Telegram AI Bot

- Built an AI-powered Telegram bot using n8n and external AI APIs for automated PDF/Image text extraction and intelligent conversational responses.
- Automated complete workflows without traditional backend coding while integrating OCR pipelines and HTTP request automation.

Education

GSFC University

2022 – 2026

B.Tech in Computer Science & Engineering

CGPA: 7.12 / 10
